I am **Front-End Developer** and I have over **3 years of experience** working in programming. I choose **Front-End** because i really like **creative things about UI/UX**, it is my pleasure when customers use my website and help me understand my customer's demand better. I am always **careful at work** to help my projects **more qualified** before sending to customers. Every line of code that I write, i always wish it to be the best for me at that moment. I always aim for the rules of being easy to read, easy to understand, easy to maintain and making it effective. I always wish to develop myself at work and I hope to learn more skills from experienced people.
